

# Roofing Solutions for Your Peace of Mind

## METAL ROOF RESTORATION SYSTEM

**DON'T REPLACE YOUR ROOF – RESTORE IT**  
Stops leaks, inhibits rust, and provides an energy-efficient, long-lasting, attractive finish coat which will extend the life of your roof for years. During the restoration process every seam and fastener is individually sealed. Then the entire roof is coated with a reflective finish coat, creating a seamless, waterproof membrane.

## SPRAY POLYURETHANE FOAM & COATING SYSTEM

**STOP LEAKS AND ENERGY LOSS FROM THE TOP DOWN**  
This is a great way to provide high-grade insulation on both roofing and interior wall applications, for top-down protection from the elements. An SPF application effectively controls air infiltration, adds building strength, and reduces cooling and heating costs.

## SINGLE-PLY MEMBRANE ROOF SYSTEM

**COOL ROOFS SAVE MONEY ON ENERGY**  
A complete waterproofing system that significantly improves the building's energy efficiency. During the restoration process, each problem area is systematically addressed, repaired and resealed. Then the entire roof is sealed with a reflective finish coat that cools the roofing surface, reducing the damaging effects of thermal shock and UV degradation.

### Stop Leaks

Conklin's 100% acrylic and VOC-compliant coatings prevent leaks where they occur most – at the seams. Your entire roof is protected by a durable, waterproof finish.

### Save Money

It costs less to repair your roof than to replace it. Because you don't tear off your old roof there are no waste disposal costs, and your building's contents are never exposed to the elements.

### Conserve Energy

Save money on air conditioning. These energy-saving coating systems keep your building cooler, whether it's air conditioned or not, by reflecting up to 85% of the sun's UV rays.

*Our mission is to give you the peace of mind you deserve, by providing superior products along with integrity and quality workmanship, for a long-term roofing solution.*
